Reverse k elements in the given Array

1. **Reverse k elements in the given Array:** Write a program to reverse every k elements in a given list L.

Input Format:

- The first line contains the value n and k separated by spaces indicates that n is the number of elements the array and k is the number of elements to be rotated.
- The second line contains the array elements that are separated by spaces.

Output Format:

- Output n elements after rotating every k elements in the given array separated by spaces.

Constraints:

- If the value of k is greater than the array size, then k should be k mod array size.

Sample Input #1:

        10 2
        1 2 3 4 5 6 7 8 9 10

Sample Output #1:

        2 1 4 3 6 5 8 7 10 9
